

Saguaro Project

A.C
And
A.F

What is the problem?

1. Identifying the age of the saguaro
2. People are destroying our environment by killing Saguaros to create more homes
3. Identifying the relation between the structure and function of the saguaro

Why is it important?

It has an important effect on the environment

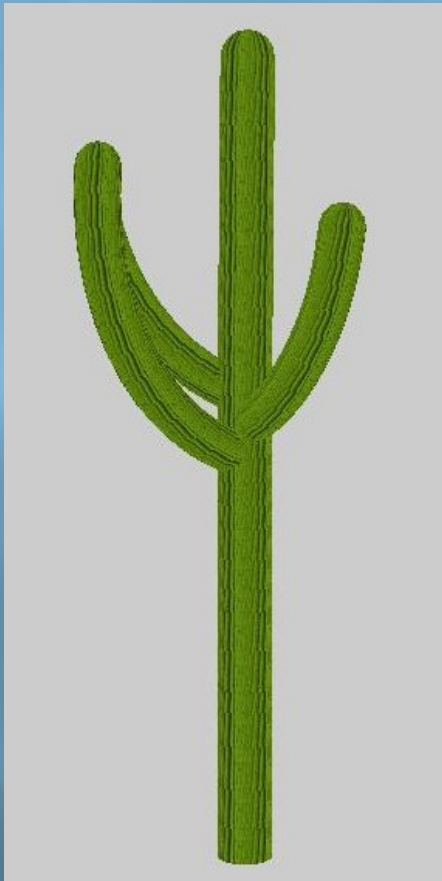

- Without saguaros animals in the desert would die
- Saguaros are a source of food and water

How are we helping?

1. We help by creating a model that shows how it ages and develops
2. Different models help us understand different saguaros in different environments

The models we developed

First Model

Second Model
