

**RICE**

**By DIANA and Mariano**

# Pictures about rice

# The Problem

The problem that we have is.....

- High population
- Food shortage
- Climate Change

# Why Is It Important?

It Is Important because.....

- Its predicted there will be 9 billion people in 2050 so we have to figure out how to grow more seeds on a plant to produce more food.
- So we can grow more food where it usually doesn't grow.

# How computer scientist can help

How computer scientist can help solve this problem.....

- They can help by documenting plants from when their seeds to when their fully grown
- They can also help by saving us time instead of us waiting 90 days (3 months) for a plant to grow

# Our Data\Model!

# Thank You!

- And a big thanks to Dr. Paul Sanchez for information on rice!!!
- Thank all of you that came to our presentations!!!!(MOM!!!!!!)(My Aunt!!!!)

**THANK YOU!!!!**
